Residential Manager

Scope

Residential Manager V1.0 is an intranet application designed for residential complex community of any sizes to communicate with residential officers, management officers, security officers and other residences.

Functionality

Residential Manager V1.0 application helps the user to add general requests, see the details about the residential complex and events easily. User can add their residence information in the entry form and can also edit and update their data.

This application provides the flexibility for the resident user to post general requests. The maintenance person will see all pending requests and service the same.

Once the request is completed the resident will enter the report stating the time taken .The reminder section allows the resident user to keep track of to do things on a particular day. The calendar option displays all-important events that will occur on a particular date.
